Another Successful Start-Up at United States Gypsum

During the last two weeks, Chris Brinkmann of our Field Service group successfully started up a new Super Giant (74") Roller Mill at USG's Sweetwater, Texas facility for grinding gypsum rock. The design conditions called for 50 tons per hour of 95% minus 100 mesh product.

The customer called this week and reported that the actual production rate of this equipment was in excess of 60 tons per hour!

Congratulations to everyone who was involved in bringing this project to a successful completion and adding another satisfied customer to our list!
